NDDOT employee receives award for work with Geographic Information Systems

The North Dakota Department of Transportation (NDDOT) is pleased to announce Brian Bieber, Information Technology Division, was the recipient of a Special Achievement in GIS (SAG) award at the 2012 ESRI International User Conference for the NDDOT Geographic Information Systems (GIS) website. SAG awards recognize users doing outstanding work with GIS technology. Of more than 100,000 ESRI customers worldwide, only about 170 were acknowledged for innovative and intelligent applications of GIS technology.

The NDDOT's most prominent public GIS application using ESRI technology is its Travel Information Map. Every application that makes up the Travel Map system is built on ESRI technology. The use of this technology allows road reporters to accurately and efficiently apply conditions to segments of roadway. All of these systems, including the Travel Information Map, were designed and developed in-house.

The Travel Information Map can be found on the NDDOT website at www.dot.nd.gov.
